## ABSTRACT

Companies worldwide have recognized the use of technology as an advantageous tool for the success of their businesses. With the help of the internet, companies have automated their businesses to be able to increase their sense of global competitiveness. New systems available over the internet had helped them provide better and more efficient services to customers and proved effectual to the rise of businesses. One of the companies joining this new world of commerce is Cabel Fine Furniture.

An online Sales and Inventory System is the proposed system for the Cabel Fine Furniture by the proponents which aims to provide the company a solution to the problems which are mostly encountered by the current manual system that the company has. It also promotes better business transactions with suppliers and customers which could be done with ease. With online sales and inventory system, customers could browse, purchase, and order products by registering and logging in with their usernames and passwords. The system can inform the managers about the critical status of products and the company could send notifications to suppliers to replenish products.

The system also produces sales and inventory reports that could be generated daily, weekly, monthly, and annually. Through the proposed system, Cabel Fine Furniture will have the opportunity of managing its business anywhere and anytime.
