ABSTRACT PAPER

The study involved taxonomic survey of common weeds found in selected sites of De La Salle University-Dasmariñas campus. Six collection sites were chosen inside De La Salle University-Dasmariñas campus, specimens were collected, preserved, dried and identified. Each individual was also placed in a herbarium. A total of 22 species, in 20 genera and 10 families were identified from the study area. The family with the most number of species was family Poaceae with seven species collected. The family which has the most represented individuals was family Asteraceae. The most occurring species in the entire campus was *Ageratum conyzoides* occurring in three sites inside the campus.
