ABSTRACT

Today, the world is not possible without technology. All aspects of our life is revolving around technology. It is the fastest and largest growing thing globally. The competitiveness of different businesses is now technology based. Businesses rely on technology to provide efficient and quality services. Vinzel Furniture Shop is one of the companies in furniture industry that competes in providing good services to their customers.

This project aimed to develop an Online Sales and Inventory System for Vinzel Furniture Shop. The system was developed in order for the furniture to have their own website for the promotion of their products as well as doing their transactions through the online site. This proposed system will help the furniture shop to give their customers quality services. The customers of Vinzel Furniture Shop will have their own account in order to have separate transactions with other customers. Information will be more secured since it is saved in a database managed by the personnel of the shop. Each personnel are also given separate accounts used for updating their products and customers information. Moreover, the shop will be able to generate their daily, weekly, monthly and annual inventory and sales report.

De La Salle University-Dasmariñas

Generations of reports will be easier and faster since the system provides functions that will automatically do it with just one click. With this proposed system Vinzel Furniture Shop will be efficient not only in providing their customers quality service but also for their own benefits.
