Abstract

Computers are widely used around the globe. They are known for their useful purposes such as creation, automation and progression of business, governmental and military activities. The use of these high tech gadgets is not only limited to routine activities and business processes but to learning and entertainment as well.

Edutainment, a mixture of both English words ‘educational’ and ‘entertainment’ is computer software designed to educate and amuse at the same time.

By creating an online game, the proponents were able to integrate the principles of edutainment in their study *Development of an Online Educational Game: “DemiGod.”* The proponents designed an online game that would review and prepare incoming college students for their college entrance examination.

The game is a mixture of three existing games – Bookworm Adventures, Ready Text Go and Sky Burger. Using these games, the proponents developed something similar, but different in terms of subject concerns and question types. DemiGod is an adventure type quiz game with a touch of role playing where gamers have to answer questions rightfully to be able to solve and finish the game.

Since this is an online game, the game proper is uploaded into a website that the proponents designed and developed. It allows the gamer to register and log in into their online account, play the game everywhere, compare scores to other users, and most especially, save and retrieve their game progress.

The users could be viewed and listed according to performance. The progress they have accumulated is saved in a database, thus making it easier to recognize those passionate gamers who have the highest scores. The proponents aim that through this, there would be an added thrill that the gamers will be coming back often to beat the high scores.

Table of Contents

CHAPTER TITLE	PAGE
1. Introduction	1
1.1 Project Context	1
1.2 Purpose and Description	5
1.3 Objectives of the Study	10
1.4 Scope and Limitations of the Study	11
2. Related Literature/System	13
2.1 Local Literatures	13
2.2 Foreign Literatures	16
3. Technical Background	36
3.1 Research Paradigm	36
3.2 Concept of the Study	36
3.3 Theories Used in the Study	37

3.4	Conceptual Operations	40
3.5	Conceptual Process	41
3.6	Operational Definitions	41
4.	Design and Methodology	44
4.1	Methodology	44
	A. Project Development	50
	B. Development Planning	60
	C. Evaluations of the Project	61
5.	Implementation Plans	72
	5.1 Installation Plans	73
	5.2 Resource Requirements	73
6.	Results and Discussion	75
	6.1 Instruments Used to Gain Result	75

6.2 Results and Detailed Discussion Obtained in the Final Evaluation	77
6.3 Basis of Data	78
6.4 Data Tables	79
6.5 Acceptability of the Product	80
7. Conclusions and Recommendations	83
7.1 Conclusions	83
7.2 Recommendations	84
