ABSTRACT

Villa Excellance Beach Resort uses manual system in its reservation and billing. As a result, the resort has encountered problems in most transactions. The problem caused by information that is redundantly copied, inaccurate information and high job turnover. In effect, these raised concerns on security. Another problem is lack of database. It needs a database to keep easy maintenance.

The proponents developed an efficient online billing and reservation system for Villa Cornelia Nature Park and Resort. This includes maintenance of reservation, customers, and facilities. This online billing and reservation system helped the manager and the receptionist of the resort to handle their jobs easily.
