Abstract

Eagle Point Resort uses a billing and reservation system for reservation transactions. Because of that, the company has a hard time in their transactions. The problem causing all of this is the data redundancy and the organization of files.

The proponent created a solution by developing a useful and efficient billing and reservation system; a system that is uploaded online to respond to the problems cited in the resort's system and a system that features the reservation and maintenance of facilities, amenities, rooms, function rooms, food and packages online. And it has a data security by providing username and password for the certain users like the customer, the reservation officers, and the owner.

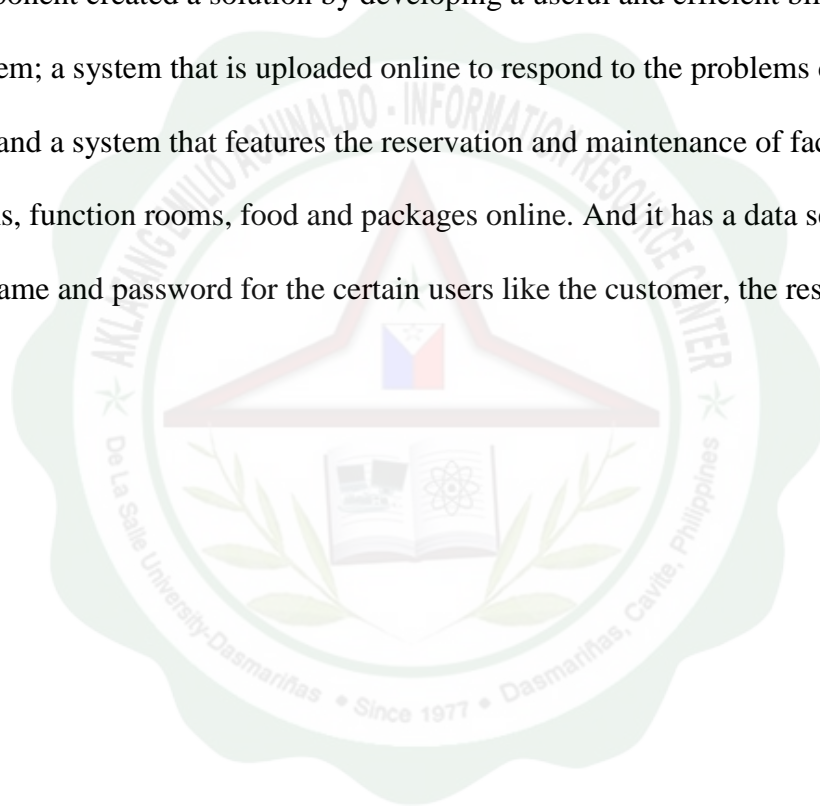

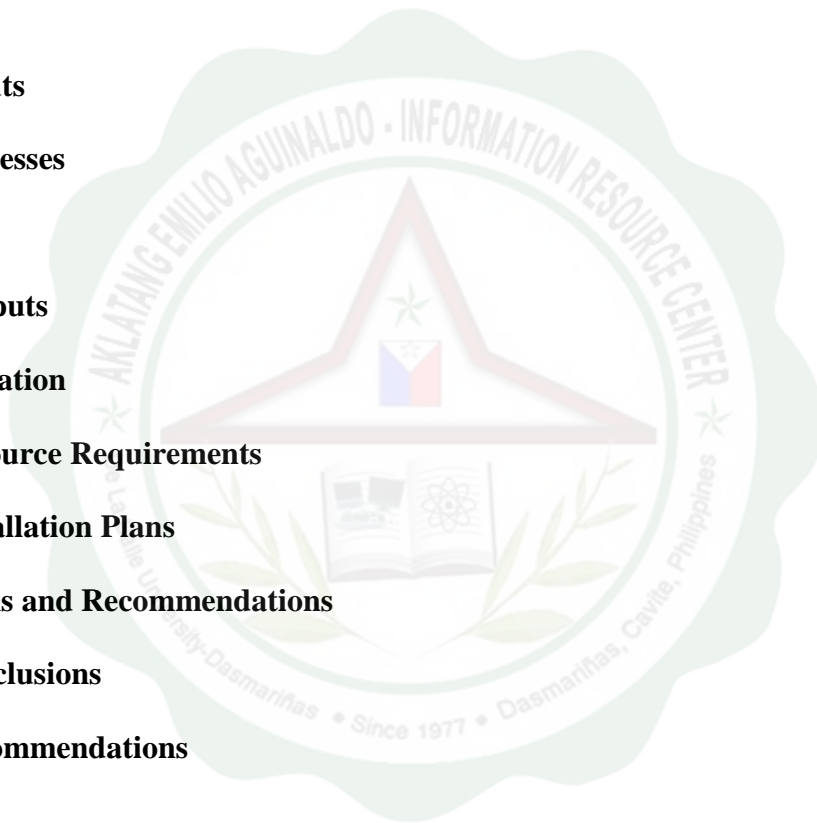

Table of Contents

1.0 Introduction	
1.1 Background of the Study	1
1.2 Statement of Research Problem	6
1.3 Statement of Objective	7
1.4 Significance of the Study	8
1.5 Scope and Limitations	9
1.6 Methodology of the Study	10
2.0 Review of Related Literature	
3.0 Theoretical Framework	
3.1 Statement of Assumptions	21
3.2 Operational Definitions	21
3.3 Theories Used in the Study	24
4.0 The Existing System	
4.1 Description of the System	29
4.2 Definition of Data Capture	29
4.3 Inputs	30
4.4 Processes	31
4.5 Files	34
4.6 Outputs	34
4.7 Data Flow Diagram	35
4.8 Problem Areas	38

5.0 The Proposed System	
5.1 System Overview	39
5.2 System Objectives	40
5.3 Scope	40
5.4 System Justification	41
6.0 Design	
6.1 Inputs	43
6.2 Processes	44
6.3 Files	49
6.4 Outputs	50
7.0 Implementation	
7.1 Resource Requirements	53
7.2 Installation Plans	54
8.0 Conclusions and Recommendations	
8.1 Conclusions	62
8.2 Recommendations	63

List of Figures and Tables

Figure 1.0: Prototyping Model	13
Existing Data Flow Diagram	35
Table 7.2: Installation Plans	42
Table 7.1: Training Plans	43
Proposed Data Flow Diagram	Appendix A
Entity-Relationship Diagram	Appendix B
Normalization	Appendix C
