

## **ABSTRACT**

The proposed system entitled “Network-Based Payroll System with Biometrics Technology for Kulinarya Orchard” is hoped improve the existing system of Kulinarya Orchard by developing a system that is beneficial to the accounting department of Kulinarya Orchard and its employees.

The proposed system is designed to view employee information, compute employee salary and generate reports about the payroll. The system uses biometrics technology to record the attendance of the employees. The system also makes use of username and password to distinguish the user type of the person. The system is also user friendly for expected users. The system has a maintenance module where the user can manage records for updating, adding, searching and deleting records of employees. It also includes computing of salary deduction, SSS, PhilHealth and tax
