

ABSTRACT

The Online Reservation with Billing System was proposed in replacement of the Manual Billing and Reservation System for Nurture Spa Village Tagaytay, for the company to have a systematized operation and transaction, in addition to a trouble-free work for the officers-in-charge. The system was built on the World-Wide Web Technologies, and was operated entirely online, providing clients with a friendly, simple-to-use, yet powerful tool for managing and optimizing throughput.

In addition, the proponents developed a proficient and useful system for Nurture Spa Village Tagaytay. There was a reservation of packages, services and products and billing for every transaction. The system was also provided an everyday inventory, and billing and invoices for the client or as requested by the client. Billing comprised the generation of invoices, along with the summary of computation for operations such as overtime, stripping, plug-in, and blast freezing.
