### ABSTRACT

The proposed system entitled “Online Sales and Inventory System for Comic Alley Corporation” develops a system for Comic Alley Corporation by creating a system that is beneficial to the Owner, Manager, Employees and Customers.

The proposed system covers an online website for the customers in which they can easily access the shop online. The front-end provides a user-friendly site wherein the customer can register and purchase online. Also, the system supplies the needed information about a certain product and checks its availability in each branch. The system also supports a back-end in which the owner, manager, or the employee entitled to handle the transactions can register and log-in in the system with a different level of security and updates and manages the products online. The system also can generate reports that allow the manager to view and print the output of the system inventory and sales reports. The proposed system also informs the employee of an item in critical level and supplies a search tab for customers for an easy item search.

The proposed system is fully integrated and functioning and is initially designed as web-based that all data and information are available and accessible to every interface and application.
